

Team Roles:

Scrum Master: Owen Estevez

Developer: Dongqi Huang

Tester: Ziran Ren

Sprint 1: Core Assignment Management

Goal:

Build the basic usable app: users can create, view, and manage assignments.

User Stories:

- Add assignments with title, course, due date
- View all assignments in one list
- Edit or delete assignments
- View assignment details (title, course, due date, notes)
- Add notes to assignments

Tasks:

- Register and account, Login/logout system
- Create assignment data model
- Build "Add Assignment" form UI
- Implement assignment list view
- Implement edit assignment functionality
- Implement delete assignment functionality
- Implement assignment detail view
- Implement notes field storage/display
- Basic navigation between list and detail views

Deliverable:

A working app where students can fully manage assignments in one place.

Burndown Chart (Estimated Hours):

Day 1 |  33

Day 2 |  30

Day 3 |  25

Day 4 |  22

Day 5 |  17

Day 6 |  12

Day 7 |  8

Day 8 |  5

Day 9 |  2

Day 10 | 0

Sprint 2: Notifications, Rewards, Engagement, and Weekly Reports

Goal:

Add motivation + automation features that increase daily usage.

User Stories:

- Receive reminders before deadlines
- Earn points for completing assignments
- View total points/progress
- Redeem rewards using points
- See progress and motivation feedback
- Keep app simple and non-distracting

Tasks:

- Implement notification system (due date alerts)
- Configure reminder timing logic
- Add points system backend logic
- Display total points UI
- Implement reward redemption system
- Generate .txt files of weekly reports (complete vs incomplete, productivity)
- Add progress visualization (optional bar or summary)
- Polish UI for simplicity (reduce clutter, improve UX)
- Final testing and bug fixes

Deliverable:

A fully functional motivational student tracker with engagement features.

Burndown Chart (Estimated Hours):

Sprint 3: Organization, Progress, Priority System, and Scheduler

Goal:

Help users actually *use* the app effectively for workload management.

User Stories:

- View upcoming assignments
- Separate completed vs incomplete assignments
- Mark assignments as completed
- Track assignment status (incomplete/completed)
- Prioritize assignments by due date and priority
- To know when to do the assignments

Tasks:

- Implement completed vs incomplete lists
- Add “mark as completed” functionality
- Build status system for assignments
- Implement sorting (due date + priority low/medium/high)
- Add priority field to assignment creation/editing
- Schedule time periods to work on assignments.
- Build “upcoming assignments” view/dashboard
- Improve UI layout for organization (sections/cards)

Deliverable:

A structured task manager that helps students prioritize and track work.
